

The Hook Framework

The Hook Framework is a four-step process used to build habit-forming products by looping users through a cycle of engagement.

Detailed Breakdown: The Hook Canvas

Phase	Component	Key Strategic Questions
1. Trigger	1.1 External Trigger	What are the relevant triggers of an action for your various personas? What are the external and internal triggers to use

Phase	Component	Key Strategic Questions
		your product or your service?
	1.2 Internal Trigger	What does the user want, and how can we make him more effective? What existing triggers for an action are generally valid? How can we replicate the actions of the user?
2. Action	Core Interaction	What is the simplest action that our user must perform to be rewarded? Have we already minimized the effort to such an extent in order to perform the action for the user?
3. Variable Rewards	Feedback Loop	How is the user rewarded? Does the reward develop beyond the original goal? Is there a reward for the community and the potential user?
4. Investment	Future Commitment	How does our persona release the next action (investment of knowledge or development of a preference for a specific action)? What possibilities

Phase	Component	Key Strategic Questions
		are there to close this loop in a better way?
